

call/N

Description

```
call(Closure, Arg)
call(Closure, Arg1, Arg2)
...
```

Calls a goal constructed by appending additional arguments to a closure.

Template and modes

```
call(+callable, ?term)
call(+callable, ?term, ?term)
...
```

Errors

Closure is a variable:

`instantiation_error`

Closure is neither a variable nor a callable term:

`type_error(callable, Closure)`

Examples

Call a goal in this constructed by appending additional arguments to a closure:

`call(Closure, Arg1, Arg2, ...)`

Call a goal in self constructed by appending additional arguments to a closure:

`::call(Closure, Arg1, Arg2, ...)`

Call a goal in an object constructed by appending additional arguments to a closure:

`Object::call(Closure, Arg1, Arg2, ...)`
