

`current_object/1`

Description

```
current_object(Object)
```

Enumerates, by backtracking, all currently defined objects. All objects are found, either static, dynamic or built-in.

Template and modes

```
current_object(?object_identifier)
```

Errors

Object is neither a variable nor a valid object identifier:

```
type_error(object_identifier, Object)
```

Examples

```
| ?- current_object(list).
```
