encoding/1

Description

```
encoding(Encoding)
```

Declares the source file text encoding. This is an **EXPERIMENTAL** source file directive, which is only supported on some Prolog compilers. When used, this directive must be the first term in the source file. Currently recognized encodings include `ascii`, `iso_8859_1`, `iso_latin_1` (an alias to the previous one), `utf8`, `unicode_be`, and `unicode_le`.

Template and modes

```
encoding(+atom)
```

Examples

```
:- encoding(utf8).

:- encoding(iso_latin_1).
```
