after/3

Description

```
after(Object, Message, Sender)
```

This is a pre-declared but user-defined public method for handling `after` events.

Template and modes

```
after(?object, ?term, ?object)
```

Errors

(none)

Examples

```
after(Object, Message, Sender) :-
    writeq(Object), write('::'), writeq(Message),
    write(' from '), writeq(Sender), nl.
```
